from uluru to the great dividing range the geology of australia explores the timeless forces that have shaped this continent

there is a large and growing need for a textbook that can form the basis for integrated classes that look at minerals rocks and other earth materials despite the need no high quality book is available for such a course earth materials is a wide ranging undergraduate textbook that covers all the most important kinds of inorganic earth materials besides traditional chapters on minerals and rocks this book features chapters on sediments and stratigraphy weathering and soils water

and the hydrosphere and mineral and energy deposits introductions to soil mechanics and rock mechanics are also included this book steers away from the model of traditional encyclopedic science textbooks but rather exposes students to the key and most exciting ideas and information with an emphasis on thinking about earth as a system the book is written in such a manner as to support inquiry discovery and other forms of active learning all chapters start with a short topical story or vignette and the plentiful photographs and other graphics are integrated completely with the text earth materials will be interesting and useful for a wide range of learners including geoscience students students taking mineralogy and petrology courses engineers and anyone interested in learning more about the earth as a system

the early chapters of the volume present data and interpretations of the geophysics of the craton and summarise with sequential maps the tectonic evolution of the craton the main body of the text and accompanying plates and figures present the stratigraphy structural history and economic geology of specific sedimentary basins and regions the volume concludes with a summary chapter in which the currently popular theories of cratonal tectonics are discussed and the unresolved questions are identified
