despite sustained debate and progress the evolving thing that is evidence based nursing or practice ebp continues to dangle a variety of conceptual and practical loose threads moreover when we think about what is being asked of students and registered or licenced practitioners in terms of ebp it is difficult not to concede that this ask is in many instances quite large and occasionally it may be unachievable ebp has and continues to improve patient client and user care yet significant questions concerning its most basic elements remain unresolved and if nurses are to contribute to the resolution or reconfiguration of these questions then as a first step we must acknowledge their existence from a range of international standpoints and perspectives contributors to this book focus on aspects of ebp that require development this focus is always robust and at times it is unashamedly provocative contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of ebp while both conflict and concord are evident among the various offerings presented here the book nonetheless creates and sustains a narrative that is bigger or more substantial than the sum of individual parts and across contributions a self assuredly critical stance towards ebp as currently practiced conceptualized and taught coexists alongside respectful admiration for all who make it happen exploring evidence based practice debates and challenges in nursing should be considered essential reading for academics and postgraduate students with an interest in evidence based practice and nursing research

san francisco hospital thereby improving the patient s perception of staff responsiveness by reducing call lights and patient falls by 25 within three months the patient population consists of cardiovascular and thoracic post operative surgical patients of all ages primarily adults the implementation of the evidence based practice of hourly rounding has been proven to increase overall patient satisfaction by improving staff responsiveness and increasing patient safety within many hospitals the measurement of effectiveness and success will be evidenced by seeing an increase in patient care scores and a reduction of falls within the unit when these metrics are met there is data that proves that this evidence based practice will drive the results we are looking for in this microsystem there are many indicators that a more efficient workflow is necessary to be established there is the constant sound of call lights ringing about an estimated 12 15 in an eight hour shift for non urgent needs upon interviewing many staff i found there was an inconsistent way and lack of education on how hourly rounds should be performed basic patient needs were not addressed within each visit from a staff member by using a process map timeline pdsa lewin s change theory swot analysis and graphs i can show you my process of improving staff responsiveness within the nursing unit in conclusion as a clinical nurse leader and patient advocate i have utilized the information gained from the microsystem data and implementation of hourly rounding thereby proving how to improve quality safety and patient care experiences within the busy medical surgical nursing unit with the evidence based practice of hourly rounding
